

HYDRACLEAR

High-efficiency filter sand for pools and spas

Enjoy sparkling, clear water with the highest quality filter sand

A uniform filter pack provides superior filtering

HYDRACLEAR™ high-efficiency filter sand is pure Northern White monocrystalline sand, the highest quality filtration sand available. Its superior quartz crystals, with the most uniform shape and size, produce a filter pack with constant density. This eliminates any clumping or channeling, so every impurity is filtered out—even traces of dust and oils. You get a steady, consistent flow of filtered water.

The purest sand means pure, chemical-free, odorless water

HYDRACLEAR filter sand is lab tested to be at least 99.5% pure silica sand that meets stringent ANSI/AWWA B100-16 standards. It is ecologically safe and free of any particles, chemicals or other impurities that could cause odors, stains or filter blockage. The only thing coming from your filter is pure water.

Extends filter life

Compared to other types of filter sand, the strong, consistent particles in HYDRACLEAR minimize chipping and flaking that can clog filters and require more frequent replacement. This reduces maintenance time and cost.

Features:

- Pure Northern White sand, the highest strength sand available
- Ecologically safe, colorless, odorless
- Superior quartz particle structure has the most uniform shape and size
- Lab tested to meet the strictest standards of quality and purity
- Made in the USA

Benefits:

- Filters everything from leaves and hair to insects and algae—even dust and oils
- Packs consistently for maximum filtering without clogging or channeling, allowing for easy backwashing
- Stronger particles resist chipping or crumbling that can clog filters and cause expensive repairs
- Pure sand is free of impurities that can cause odors, stains or blockage
- Perfect for swimming pools, spas, aquariums, etc.
